New Zealand Threat Classification Series is a scientific monograph series presenting publications related to the New Zealand Threat Classification System (NZTCS). Most will be lists providing NZTCS status of members of a plant or animal group (e.g. algae, birds, spiders). There are currently 23 groups, each assessed once every 5 years. From time to time the manual that defines the categories, criteria and process for the NZTCS will be reviewed. Publications in this series are considered part of the formal international scientific literature.

This report is available from the departmental website in pdf form. Titles are listed in our catalogue on the website, refer www.doc.govt.nz under *Publications*.

The NZTCS database can be accessed at nztc.org.nz. For all enquiries, email threatstatus@doc.govt.nz.

Abstract

The conservation status of 1156 New Zealand Araneae (spider) taxa was assessed using the New Zealand Threat Classification System (NZTCS). A list of these taxa is presented, along with a statistical summary and brief notes on the most important changes. This list replaces all previous NZTCS lists for Araneae. Of the Araneae taxa assessed in this review, 4 are Threatened, 182 are At Risk and 428 are Not Threatened; 49 are Introduced and Naturalised and 493 Data Deficient because insufficient information is available to assess their conservation status. In addition, 24 'taxa' are listed as taxonomically unresolved. These include 7 'taxa' that are believed to be multiple species. Of these 7 'taxa', 3 are listed as formally described and named species.

Keywords: New Zealand Threat Classification System, NZTCS, conservation status, Arachnida, Araneae, spider

1. Summary

In 2010, Sirvid et al. (2012) assessed the conservation status of 1130 New Zealand Araneae (spider) taxa using the criteria specified in the New Zealand Threat Classification System (NZTCS) manual (Townsend et al. 2008). Here we report on a new assessment of 1156 Araneae taxa which includes 37 species being assessed for the first time (Table 1).

Four of the taxa that were assessed by Sirvid et al. (2012) are not included in this report, as they are now considered to be conspecific with other taxa assessed here (Table 2). One taxon that was assessed by Sirvid et al. (2012) – *Nanometa gentilis* – has been rejected from this report because it is now known that it does not occur in New Zealand and its previous assessment was based on misidentifications.

Table 1. Araneae taxa assessed for the first time in this report.

NAME AND AUTHORITY	FAMILY
<i>Adoxotoma forsteri</i> Zabka, 2004	Salticidae
<i>Artoriopsis expolita</i> (L. Koch, 1877)	Lycosidae
<i>Coleosoma octomaculatum</i> (Bösenberg & Strand, 1906)	Theridiidae
<i>Cryptachaea gigantipes</i> (Keyserling, 1890)	Theridiidae
<i>Cyclosa fulignata</i> (L. Koch, 1872)	Araneidae
<i>Dolomedes dondalei</i> Vink & Dupérré, 2010	Pisauridae
<i>Dolomedes facetus</i> L. Koch, 1876	Pisauridae
<i>Nanometa forsteri</i> Álvarez-Padilla, Kallal & Hormiga, 2020	Tetragnathidae
<i>Opisthoncus polyphemus</i> (L. Koch, 1867)	Salticidae
<i>Pahoroides aucklandica</i> Fitzgerald & Sirvid, 2011	Physoglenidae
<i>Pahoroides balli</i> Fitzgerald & Sirvid, 2011	Physoglenidae
<i>Pahoroides confusa</i> Fitzgerald & Sirvid, 2011	Physoglenidae
<i>Pahoroides forsteri</i> Fitzgerald & Sirvid, 2011	Physoglenidae
<i>Pahoroides gallina</i> Fitzgerald & Sirvid, 2011	Physoglenidae
<i>Pahoroides kohukohu</i> Fitzgerald & Sirvid, 2011	Physoglenidae
<i>Philoponella congregabilis</i> (Rainbow, 1916)	Uloboridae
<i>Sidymella trapezia</i> (L. Koch, 1874)	Thomisidae
<i>Taraira oculata</i> Álvarez-Padilla, Kallal & Hormiga, 2020	Tetragnathidae
<i>Tawhai arborea</i> (Urquhart, 1891)	Tetragnathidae
<i>Tingotingo aho</i> Hormiga & Scharff, 2020	Malkaridae
<i>Tingotingo porotiti</i> Hormiga & Scharff, 2020	Malkaridae
<i>Tingotingo pouaru</i> Hormiga & Scharff, 2020	Malkaridae
<i>Tingotingo tokorera</i> Hormiga & Scharff, 2020	Malkaridae
<i>Trite pollardi</i> Patoleta & Zabka, 2017	Salticidae
<i>Uliodon hawkesi</i> Hogg, 1911	Zoropsidae
<i>Whakamoke guacamole</i> Hormiga & Scharff, 2020	Malkaridae
<i>Whakamoke heru</i> Hormiga & Scharff, 2020	Malkaridae
<i>Whakamoke hunahuna</i> Hormiga & Scharff, 2020	Malkaridae
<i>Whakamoke orongorongo</i> Hormiga & Scharff, 2020	Malkaridae
<i>Whakamoke paoka</i> Hormiga & Scharff, 2020	Malkaridae
<i>Whakamoke rakiura</i> Hormiga & Scharff, 2020	Malkaridae
<i>Whakamoke tarakina</i> Hormiga & Scharff, 2020	Malkaridae
<i>Diaea</i> CMNZ heautosyntypes vial <i>Diaea sphaeroides</i>	Thomisidae
<i>Orepukia</i> sp. 1 (Hawke's Bay)	Cycloctenidae
<i>Pianoa</i> sp. 1 (Richmond Ranges)	Gradungulidae
<i>Sidymella</i> sp. 1 "snouty" (LUNZ; Three Kings)	Thomisidae
<i>Sidymella</i> sp. 2 (MONZ AS.003611; "dwarf")	Thomisidae

Table 2. Taxa that were assessed by Sirvid et al. (2012) but that, in this report, are treated as conspecific with other taxa that they assessed

TAXON IN SIRVID ET AL. (2012)	CONSPECIFIC TAXON IN THIS REPORT	FAMILY
<i>Sidymella benhami</i> (Hogg, 1911)	<i>Sidymella angulata</i> (Urquhart, 1885)	Thomisidae
<i>Synema suteri</i> Dahl, 1907	<i>Diaea ambara</i> (Urquhart, 1885)	Thomisidae
<i>Uliodon cervinus</i> L. Koch, 1873	<i>Uliodon albopunctatus</i> (L. Koch, 1873)	Zoropsidae
<i>Uliodon frenatus</i> L. Koch, 1873	<i>Uliodon albopunctatus</i> (L. Koch, 1873)	Zoropsidae

The names of 22 taxa in this report have changed since the 2010 assessment (Sirvid et al. 2012) (Table 3).

Table 3. Name changes affecting New Zealand Araneae taxa between the publication of Sirvid et al. 2012 and this document.

NAME AND AUTHORITY IN SIRVID ET AL. (2012)	NAME AND AUTHORITY IN THIS REPORT	FAMILY
<i>Arianme triangulatus</i> (Urquhart, 1887)	<i>Ariamnes triangulatus</i> (Urquhart, 1887)	Theridiidae
<i>Cheiracanthium stratioticum</i> L. Koch, 1873	<i>Eutittha stratiotica</i> (L. Koch, 1873)	Cheiracanthiidae
<i>Cosmophasis archeyi</i> Berland, 1931	<i>Clynotis archeyi</i> (Berland, 1931)	Salticidae
<i>Drapetisca australis</i> Forster, 1955	<i>Diploplecta australis</i> (Forster, 1955)	Linyphiidae
<i>Dunstania angustiae</i> (Marples, 1959)	<i>Dunstanoides angustiae</i> (Marples, 1959)	Desidae
<i>Dunstania hesperis</i> Forster & Wilton, 1973	<i>Dunstanoides hesperis</i> (Forster & Wilton, 1973)	Desidae
<i>Dunstania hinawa</i> Forster & Wilton, 1973	<i>Dunstanoides hinawa</i> (Forster & Wilton, 1973)	Desidae
<i>Dunstania hova</i> Forster & Wilton, 1973	<i>Dunstanoides hova</i> (Forster & Wilton, 1973)	Desidae
<i>Dunstania kochi</i> Forster & Wilton, 1973	<i>Dunstanoides kochi</i> (Forster & Wilton, 1973)	Desidae
<i>Dunstania mira</i> Forster & Wilton, 1973	<i>Dunstanoides mirus</i> (Forster & Wilton, 1973)	Desidae
<i>Dunstania montana</i> Forster & Wilton, 1973	<i>Dunstanoides montanus</i> (Forster & Wilton, 1973)	Desidae
<i>Dunstania nuntia</i> (Marples, 1959)	<i>Dunstanoides nuntius</i> (Marples, 1959)	Desidae
<i>Dunstania salmoni</i> Forster & Wilton, 1973	<i>Dunstanoides salmoni</i> (Forster & Wilton, 1973)	Desidae
<i>Eryciniolia purpurapunctata</i> (Urquhart, 1889)	<i>Nanometa purpurapunctata</i> (Urquhart, 1889)	Tetragnathidae
<i>Hypoblemum albovitattum</i> (Keyserling, 1882)	<i>Maratus griseus</i> (Keyserling, 1882)	Salticidae
<i>Marpissa arenaria</i> Urquhart, 1888	<i>Euophrys arenaria</i> (Urquhart, 1888)	Salticidae
<i>Meta rufolineata</i> (Urquhart, 1889)	<i>Taraira rufolineata</i> (Urquhart, 1889)	Tetragnathidae
<i>Orsinome lagenifera</i> (Urquhart, 1888)	<i>Nanometa lagenifera</i> (Urquhart, 1888)	Tetragnathidae
<i>Parapua punctata</i> Forster, 1959	<i>Taphiassa punctata</i> (Forster, 1959)	Anapidae
<i>Periegops</i> sp.	<i>Periegops keani</i> Vink, Dupérré & Malumbres-Olarte, 2013	Periegopidae
<i>Supunna picta</i> (L. Koch, 1873)	<i>Nyssus coloripes</i> Walckenaer, 1805	Corinnidae
<i>Theridion pumilio</i> Urquhart, 1886	<i>Diploplecta pumilio</i> (Urquhart, 1886)	Linyphiidae

While the NZTCS assessment for spiders attempts to cover all currently known taxa, there are nonetheless hundreds of species yet to be documented scientifically and our knowledge of many described species is still extremely limited. For example, a number of mygalomorph species are known from only one or two individuals collected at single localities. In some other families or genera, there is uncertainty around the number of valid taxa they contain, as the taxonomic works that underpin them are outmoded or otherwise inadequate (e.g. Salticidae).

The numbers of taxa in each conservation status category in Sirvid et al. (2012) and this assessment are summarised and compared in Table 4.

New information on 31 taxa previously assessed as Data Deficient was sufficient to determine their conservation status in this assessment (Table 5). *Migas taierii* is assessed as Threatened – Nationally Endangered because it is known only from a single unprotected site that is prone to erosion. *Periegops keani* is now known only from the Alderman Islands after three surveys failed to find it on East Cape where it had previously been recorded. *Periegops keani* has been assessed

Table 4. Statistical comparison of the status of New Zealand Araneae taxa assessed in publication of Sirvid et al. 2012 and 2020 (this document).

	2010	2020
Data Deficient	527	493
Threatened – Nationally Critical	2	1
Threatened – Nationally Endangered	1	2
Threatened – Nationally Vulnerable	0	1
At Risk – Declining	1	1
At Risk – Relict	7	11
At Risk – Naturally Uncommon	147	170
Not Threatened	403	428
Introduced and Naturalised	42	49
Total	1130	1156

Table 5. Summary of changes to the number of taxa in each conservation status between 2010 (Sirvid et al. 2012) and 2020 (this report). A 'neutral' change is any movement into or out of Data Deficient.

TYPE OF CHANGE, REASON, CONSERVATION STATUS	No. TAXA
<i>BETTER</i>	2
More knowledge	2
Not Threatened	2
<i>NEUTRAL</i>	34
Greater uncertainty	1
Data Deficient	1
More knowledge	32
Nationally Endangered	2
Nationally Vulnerable	1
Relict	1
Naturally Uncommon	15
Not Threatened	12
Introduced and Naturalised	2
<i>NO CHANGE</i>	1084
Data Deficient	491
Nationally Critical	1
Declining	1
Relict	7
Naturally Uncommon	145
Not Threatened	399
Introduced and Naturalised	39
<i>NEW LISTING</i>	37
Data Deficient	1
Relict	3
Naturally Uncommon	10
Not Threatened	15
Introduced and Naturalised	8
Total	1156

as Threatened – Nationally Vulnerable. Sixteen Data Deficient taxa are assessed as At Risk in this report and 12 are Not Threatened. One Data Deficient taxon, listed as *Argoctenus* spp. is now accepted as a group of five unnamed Australian taxa that are Introduced and Naturalised in New Zealand. Of the 23 newly listed taxa, none are Threatened, two are At Risk – Relict, eight are At Risk – Naturally Uncommon, five are Not Threatened and eight are Introduced and Naturalised. The conservation status of three taxa has changed between the 2010 assessment (Sirvid et al. 2012) and this one (Table 6). The status of *Zealoctenus cardronaensis* was changed from Threatened – Nationally Critical back to Data Deficient as it was originally assessed in 2002 (Hitchmough 2002). The failure to observe this species in recent surveys was considered to be the result of ineffective sampling techniques, rather than a reflection of population conditions and, therefore, the status Data Deficient is more appropriate. Improved knowledge about populations of *Kapitia obscura* and *Cantuaria huttoni* has resulted in the status of these species changing from At Risk – Naturally Uncommon to Not Threatened in the current assessment.

Table 6. Summary of status changes of Araneae taxa between 2010 (Sirvid et al. 2012, data in rows) and 2020 (this report, data in columns). Numbers to the right of the diagonal (mid-grey) indicate improved status (e.g. two taxa have moved from At Risk – Naturally Uncommon in 2010 to Not Threatened in 2020), numbers to the left of the diagonal (light grey) indicate poorer status, numbers on the diagonal (dark grey) have not changed, and numbers without shading are taxa that have moved into or out of Data Deficient, non-resident native taxa, introduced and naturalised taxa, taxa added to this assessment, or taxa that have not been assessed (NA) because they are now known not to occur in New Zealand, and taxa that are no longer considered to be distinct (TI) from other taxa in this report.

		Conservation status 2020											
		Total 1161	DD 493	NC 31	NE 2	NV 1	Dec 1	Rel 11	NU 170	NT 428	IN 49	NA 1	TI 4
Conservation status 2010	Data Deficient (DD)	527	491		1	1		1	15	12	2		4
	Threatened – Nationally Critical (NC)	2	1	1									
	Threatened – Nationally Endangered (NE)	1			1								
	Threatened – Nationally Vulnerable (NV)	0				0							
	At Risk – Declining (Dec)	1					1						
	At Risk – Relict (Rel)	7						7					
	At Risk – Naturally Uncommon (NU)	147							145	2			
	Not Threatened (NT)	400 ¹								399		1	
	Introduced and Naturalised (IN)	39 ¹									39		
	Not listed	37	1					3	10	15	8		

¹ Sirvid et al. 2012 reported on 403 species assessed as Not Threatened and 42 species assessed as Introduced and Naturalised (Table 4). In this report, we reassessed 400 of the 403 species assessed as Not Threatened and 39 of the 42 species assessed as Introduced and Naturalised. We were unable to identify the six species that were listed in Sirvid et al. 2012 and not recorded in the NZTCS database.

Taxonomic works continue to be an important source of information for assessing taxa for NZTCS. Not only do they identify new species, they also clarify the taxonomic status of previously known taxa. Furthermore, they contain geographic data based on new and historic collection records which allows us to build a more accurate picture of species ranges. This is extremely valuable in reassessment of Data Deficient taxa and can result in a change of category. For these reasons, we recommend that more resources be assigned to taxonomic work on groups containing Data Deficient taxa. Other approaches that could also improve the amount of information available for assessments include supporting field work to locate poorly known species and searching and documenting institutional collections.

Nine coastal taxa may be affected by loss of habitat from rising sea levels as a result of climate change. Three of these are Data Deficient, five are At Risk – Naturally Uncommon and one is Not Threatened. While the conservation status of these taxa is not expected to change before the next NZTCS assessment is due, populations should be monitored to understand the anticipated extent and rate of climate-related habitat loss in relation to projected rises in sea level.

2. Conservation status of New Zealand Araneae (spiders)

Taxa are assessed according to the criteria of Townsend et al. (2008), grouped by conservation status, then alphabetically by scientific name. For non-endemic species that are threatened internationally, the IUCN category is listed alongside the NZTCS listing. Categories are ordered by degree of loss, with Extinct at the top of the list and Not Threatened at the bottom, above Introduced and Naturalised. The Data Deficient list is inserted between Extinct and Threatened. Although the true status of Data Deficient taxa will span the entire range of available categories, taxa are in that list mainly because they are very seldom seen, so most are likely to end up being considered threatened and some may already be extinct.

Brief descriptions of the NZTCS categories and criteria are provided in section 2.2. See Townsend et al. (2008) for full definitions of categories, criteria and qualifiers, and explanation of the assessment process (<https://www.doc.govt.nz/globalassets/documents/science-and-technical/sap244.pdf>).

2.1 Assessments

The conservation status of 1156 New Zealand Araneae taxa is presented in Table 7. The full data for the taxa listed in this table can be viewed and downloaded at <https://nztns.org.nz/reports/1096>.

<i>Isopeda villosa</i> L. Koch, 1875	spider	Sparassidae		SO
<i>Lampona cylindrata</i> (L. Koch, 1866)	white-tail spider	Lamponidae		SO
<i>Lampona murina</i> L. Koch, 1873	white-tail spider	Lamponidae		SO
<i>Latrodectus hasseltii</i> Thorell, 1870	Australian redback spider	Theridiidae		SO
<i>Maratus griseus</i> (Keyserling, 1882)	jumping spider	Salticidae		SO
<i>Mermessus fradeorum</i> (Berland, 1932)	money spider	Linyphiidae		SO
<i>Microctenonyx subitaneus</i> (O. Pickard-Cambridge, 1875)	money spider	Linyphiidae		SO
<i>Nesticodes rufipes</i> (Lucas, 1846)	cobweb spider	Theridiidae		SO
<i>Nyssus coloripes</i> Walckenaer, 1805	corinnid sac spider	Corinnidae		SO
<i>Oecobius navus</i> Blackwall, 1859	spider	Oecobiidae		
<i>Opisthoncus polyphemus</i> (L. Koch, 1867)	jumping spider	Salticidae		
<i>Ostearius melanopygius</i> (O. Pickard-Cambridge, 1880)	money spider	Linyphiidae		SO
<i>Parasteatoda tepidariorum</i> (C. L. Koch, 1841)	cobweb spider	Theridiidae		SO
<i>Philoponella congregabilis</i> (Rainbow, 1916)	hackled orbweaver spider	Uloboridae		
<i>Pholcus phalangoides</i> (Fuesslin, 1775)	daddy long-legs spider	Pholcidae		SO
<i>Poecilopachys australasia</i> (Griffith & Pidgeon, 1833)	orbweaver spider	Araneidae		SO
<i>Procambidgea grayi</i> Davies, 2001	sheetweb spider	Stiphidiidae		SO
<i>Psilochorus simoni</i> (Berland, 1911)	wine cellar spider	Pholcidae		SO
<i>Sidymella longipes</i> (L. Koch, 1874)	crab spider	Thomisidae		SO
<i>Sidymella trapezia</i> (L. Koch, 1874)	square-ended crab spider	Thomisidae		
<i>Steatoda capensis</i> Hann, 1990	cobweb spider	Theridiidae		SO
<i>Steatoda grossa</i> (C. L. Koch, 1838)	cobweb spider	Theridiidae		SO
<i>Stiphidion facetum</i> Simon, 1902	sheetweb spider	Stiphidiidae		SO
<i>Tegenaria domestica</i> (Clerck, 1757)	funnel weaver spider	Agelenidae		
<i>Tenuiphantes tenuis</i> (Blackwall, 1852)	money spider	Linyphiidae		SO
<i>Tetragnatha nitens</i> (Audouin, 1826)	long-jawed orbweaver spider	Tetragnathidae		SO
<i>Zygiella x-notata</i> (Clerck, 1757)	missing sector orbweaver spider	Araneidae		SO
Taxonomically Unresolved (1)				
<i>Argoctenus</i> spp.	wandering spider	Miturgidae		S?O

2.2 NZTCS categories, criteria and qualifiers

See https://nztc.org.nz/content/NZTCS_QUALIFIERS, for details of criteria and qualifiers, which are abbreviated as follows:

CD	Conservation Dependent
CI	Climate Impact
CR	Conservation Research needed
De	Designated
DPR	Data Poor Recognition
DPS	Data Poor Size
DPT	Data Poor Trend
EF	Extreme Fluctuations
EW	Extinct in the Wild
IE	Island Endemic
Inc	Increasing
OL	One Location
PD	Partial Decline
PE	Possibly extinct
RF	Recruitment Failure
RR	Range Restricted
SO	Secure Overseas
S?O	Overseas security uncertain
Sp	Sparse
St	Stable
TO	Threatened Overseas

Data Deficient

Taxa that cannot be assessed due to a lack of current information about their distribution and abundance. It is hoped that listing such taxa will stimulate research to find out the true category (for a fuller definition see Townsend et al. 2008).

Threatened

Taxa that meet the criteria specified by Townsend et al. (2008) for the categories Nationally Critical, Nationally Endangered and Nationally Vulnerable.

Threatened – Nationally Critical

Criteria for Nationally Critical:

A – very small population (natural or unnatural)

- A(1) <250 mature individuals
- A(2) ≤2 subpopulations, ≤200 mature individuals in the larger subpopulation
- A(3) Total area of occupancy ≤1 ha (0.01 km²)

B – small population (natural or unnatural) with a high ongoing or predicted decline

- B(1) 250–1000 mature individuals, predicted decline 50–70%
- B(2) ≤5 subpopulations, ≤300 mature individuals in the largest subpopulation, predicted decline 50–70%
- B(3) Total area of occupancy ≤10 ha (0.1 km²), predicted decline 50–70%

C – population (irrespective of size or number of subpopulations) with a very high ongoing or predicted decline (>70%)

- C Predicted decline >70%

Threatened – Nationally Endangered

Criteria for Nationally Endangered:

A – small population (natural or unnatural) that has a low to high ongoing or predicted decline

- A(1) 250–1000 mature individuals, predicted decline 10–50%
- A(2) ≤5 subpopulations, ≤300 mature individuals in the largest subpopulation, predicted decline 10–50%
- A(3) Total area of occupancy ≤10 ha (0.1 km²), predicted decline 10–50%

B – small stable population (unnatural)

- B(1) 250–1000 mature individuals, stable population
- B(2) ≤5 subpopulations, ≤300 mature individuals in the largest subpopulation, stable population
- B(3) Total area of occupancy ≤10 ha (0.1 km²), stable population

C – moderate population and high ongoing or predicted decline

- C(1) 1000–5000 mature individuals, predicted decline 50–70%
- C(2) ≤15 subpopulations, ≤500 mature individuals in the largest subpopulation, predicted decline 50–70%
- C(3) Total area of occupancy ≤100 ha (1 km²), predicted decline 50–70%

Threatened – Nationally Vulnerable

Criteria for Nationally Vulnerable:

A – small, increasing population (unnatural)

- A(1) 250–1000 mature individuals, predicted increase >10%
- A(2) ≤5 subpopulations, ≤300 mature individuals in the largest subpopulation, predicted increase >10%
- A(3) Total area of occupancy ≤10 ha (0.1 km²), predicted increase >10%

B – moderate, stable population (unnatural)

- B(1) 1000–5000 mature individuals, stable population
- B(2) ≤15 subpopulations, ≤500 mature individuals in the largest subpopulation, stable population
- B(3) Total area of occupancy ≤100 ha (1 km²), stable population

C – moderate population, with population trend that is declining

- C(1) 1000–5000 mature individuals, predicted decline 10–50%
- C(2) ≤15 subpopulations, ≤500 mature individuals in the largest subpopulation, predicted decline 10–50%
- C(3) Total area of occupancy ≤100 ha (1 km²), predicted decline 10–50%

D – moderate to large population and moderate to high ongoing or predicted decline

- D(1) 5000–20 000 mature individuals, predicted decline 30–70%
- D(2) ≤15 subpopulations, ≤1000 mature individuals in the largest subpopulation, predicted decline 30–70%
- D(3) Total area of occupancy ≤1000 ha (10 km²), predicted decline 30–70%

E – large population and high ongoing or predicted decline

- E(1) 20 000–100 000 mature individuals, predicted decline 50–70%
- E(2) Total area of occupancy ≤10 000 ha (100 km²), predicted decline 50–70%

At Risk

Taxa that meet the criteria specified by Townsend et al. (2008) for Declining, Recovering, Relict and Naturally Uncommon.

At Risk – Declining

Criteria for Declining:

A – moderate to large population and low ongoing or predicted decline

A(1) 5000–20 000 mature individuals, predicted decline 10–30%

A(2) Total area of occupancy \leq 1000 ha (10 km²), predicted decline 10–30%

B – large population and low to moderate ongoing or predicted decline

B(1) 20 000–100 000 mature individuals, predicted decline 10–50%

B(2) Total area of occupancy \leq 10 000 ha (100 km²), predicted decline 10–50%

C – very large population and low to high ongoing or predicted decline

C(1) >100 000 mature individuals, predicted decline 10–70%

C(2) Total area of occupancy >10 000 ha (100 km²), predicted decline 10–70%

At Risk – Relict

Taxa that have undergone a documented decline within the last 1000 years, and now occupy <10% of their former range and meet one of the following criteria:

A 5000–20 000 mature individuals; population stable (\pm 10%)

B >20 000 mature individuals; population stable or increasing at >10%

The range of a relictual taxon takes into account the area currently occupied as a ratio of its former extent. Relict can also include taxa that exist as reintroduced and self-sustaining populations within or outside their former known range (for more details see Townsend et al. (2008)).

At Risk – Naturally Uncommon

Taxa whose distribution is confined to a specific geographical area or which occur within naturally small and widely scattered populations, where this distribution is not the result of human disturbance.

Non-resident Native

Taxa whose natural presence in New Zealand is either discontinuous (Migrant) or sporadic or temporary (Vagrant) or which have succeeded in recently (since 1950) establishing a resident breeding population (Coloniser).

Non-resident Native – Vagrant

Taxa whose occurrences, though natural, are sporadic and typically transitory, or migrants with fewer than 15 individuals visiting New Zealand per annum.

Not Threatened

Resident native taxa that have large, stable populations.

Introduced and Naturalised

Taxa that have become naturalised in the wild after being deliberately or accidentally introduced into New Zealand by human agency.
